

Rebound Resilience Tester

- Measurement of elastic elasticity of rubber in a specified hard range, by pendulum method
- Equipped with 4.3 inch color touch screen for easy setting
- Featured with a strong pendulum and is equipped with a standard spherical hammer
- Designed based on impact center and has a capacity of 0.5 J
- Featured with automatic pendulum release system
- Equipped with test holder with the ability to adjust the position to hold the test with different thicknesses
- Display the return height and stiffness of each test digitally
- Designed and manufactured in accordance with ISO 4662, ASTM D7121, DIN 53512
